**8KMiles Launches FuGen MISPTM to Extend Secure Cloud Framework and ID Federation Management**

*Platform includes more than 200 pre-configured SaaS applications to guarantee cloud identity interoperability, real-time conformance and enable secure SSO*

**San Ramon, Calif., - August 20, 2013** – 8KMiles, a leading global cloud computing company, today announced that the company is now offering the FuGen Multi-domain Identity Services Platform (MISPTM) to help enterprises rapidly set up identity federations with minimum friction and cost ownership, establish a delivery infrastructure for scaling, automated partner testing and monitor deployments through real-time compliance certification.

The FuGen MISPTM supports more than 15 government profiles, process templates for establishing large federation communities, and more than 200 pre-configured and validated SaaS applications including Salesforce, Office365, Dropbox, NetSuite, Concur, Citrix, and many more. Customers can leverage these capabilities for rapid federation deployments to keep in compliance with government policies and regulatory mandates. Enterprises can also take advantage of onsite/offsite support for business partner onboarding and pre-qualification, policy review, SaaS partner certification, partner interoperability testing and reporting services.

Based on industry standards, the FuGen MISPTM can work either on-premise or from a private/hybrid cloud to augment the abilities of existing Identity and Access Management, Single Sign-On (SSO) solutions and legacy services. It will allow enterprise customers to establish Federated identity access with their partners and manage automated compliance certification and monitoring. Users will find significantly reduced costs, fewer interoperability and compliance issues, and less time needed to integrate and scale identity federations.

“We’re looking forward to releasing these features across the 8KMiles platform as an end-to-end certification and management solution all of our enterprise users,” said COO at 8KMiles Lena Kannappan. “This should drive more customer leads and new revenue streams within their partner ecosystems for faster time to market. By providing industry leading expertise and methodology, we also equip our users with significant cost savings for cross domain SSO implementation through the MISPTM-hosted interoperability virtual test environments for disparate infrastructures and real-time monitoring.”

“The new FuGen MISPT™ will not only strengthen the deep expertise 8KMiles already holds in secure virtual cloud solutions, but the new hub user interface already supports more than 200 SaaS applications out of the box,” said Suresh Venkatachari, 8KMiles chairman and CEO. “With so many companies looking to extend their SaaS capabilities, 8KMiles is excited to offer automated and pre-configured partner connections to help reduce troubleshooting, costs and integration time for hundreds of SaaS partners. By incorporating FuGen MISPT™ into the 8KMiles Secure Cloud Framework, users can look forward to an added layer of security for streamlining authentication and enabling secure SSO access across multiple cloud-based business systems.”

### **About 8KMiles**

8KMiles is a global cloud computing company based in the U.S. The 8KMiles platform offers cloud, identity, big data security services, and solutions to better serve the growing security and compliance needs of enterprises and government agencies. As an Amazon Web Services Premier Consulting Partner, 8KMiles has seasoned on-demand professionals with in-depth AWS and Security expertise who can enhance customer applications to leverage the elasticity of AWS and make applications even more secure on AWS than on-premise hosting.
